

Ore Washing Plant

Introduction

The Ore Washing Plant is the multi-block version of the Ore Washer, Simple Washer, and Chemical Bath. The kind of operation it performs may be switched by changing the mode on the controller. The multi-block is 400% faster than single-blocks of the same tier.

Construction

- 1 Ore Washing Plant (Controller, front center)
- 40-71 Wash Plant Casings
- 1 Muffler Hatch (any tier, replace any casing)
- 1 Maintenance Hatch (replace any casing)
- 0+ Input Bus (replace any casing)
- 0+ Output Bus (replace any casing)
- 1+ Input Hatch, at least one must be filled with water at all times(replace any casing)
- 0+ Output Hatch (replace any casing)
- 1+ Energy Hatch (replace any casing)

Note that since one input hatch must be filled with water, it is highly recommended to use a reservoir hatch to keep the Ore Washing Plant filled at all times.

Usage

The mode may be switched on the controller so that it may act as an ore washer, simple washer, or chemical bath.
