

Insane Voltage (IV)

(Redirected from IV)

WIP!
This page is a **Work In Progress**. You can help out by adding more information to the page.

Insane Voltage (abbreviated as **IV**) is the fifth electric tier. In this tier, multiple new multiblocks and mechanics are introduced to you such as Assembly Line, Industrial Electrolyzer, and many more. This is also the tier where many parts of magic (Thamucraft, etc.) are unlocked for players to use; however, as always, watch your wrap effect if you have been getting so many wrap effects. While transitioning from the old tier to a new tier is usually the hard part, the IV tier is by far the hardest tier to get through. If you managed to get through EV tier, prepare yourself because this tier requires a very heavy transition in almost every aspect of your base, including infrastructure and crafting. At this point, manual crafting is no longer a feasible option. With this being said, **be prepared for a big change to your base!**

An important note to keep in mind when reaching this tier: This is another tier where most players get burnt out. If you managed not to get burnt out in the EV tier, you may have more chances to get burnt out in this tier. Compared to EV, this tier is much longer and resource-intensive than EV, so do not rush into the IV tier if you want to avoid getting burned out. Take your time.
