

# Steam Presser

The **Steam Presser** is a Steam tier multiblock that functions as a large forge hammer. Not only can the Steam Presser process up to 8 items at once, but it is 25% faster than single-block steam machines of the same pressure and only consumes 62.5% of the steam normally required. There are two tiers of the machine: basic (T1) and high-pressure (T2).

## Construction

There are two tiers of the Steam Presser with the only difference being the material of the casings. The Steam Presser only accepts steam through a steam hatch (NOT an input hatch), much like other steam tier multiblocks. The Multiblock Structure Hologram Projector can show/build a basic Steam Presser, but holding at least two in a single stack can show/build the high-pressure version.

### Steam Presser

Mod	Gregtech 5
Type	Tile Entity
Relevant Quest	Steam stomping!
Tier	Steam
Size	5x5x7 (LxWxH)
Pollution	None

Assuming plates are made in a forge hammer and rods are made with a file, a basic Steam Presser (with the necessary hatches) requires 481 bronze ingots and 43 brick blocks to build. Similarly, a high-pressure Steam Presser requires 745 steel ingots, 66 bronze ingots, and 4 brick blocks to build.

- Basic (T1) Requires:**
  - 1 Steam Presser (Controller)
  - 35-39 Bronze Plated Bricks
  - 2 Bronze Pipe Casing
  - 2 Block of Iron
  - 1+ Steam Hatch (any casing)
  - 1+ Steam Input Bus (any casing)
  - 1+ Steam Output Bus (any casing)

**High-Pressure (T2) Requires:**
  - 1 Steam Presser (Controller)
  - 35-39 Solid Steel Machine Casing
  - 2 Steel Pipe Casing
  - 2 Block of Steel (from GregTech)
  - 1+ Steam Hatch (any casing)
  - 1+ Steam Input Bus (any casing)
  - 1+ Steam Output Bus (any casing)

## Wallsharing

X: 987 Y: 194

A large amount of bronze or steel can be saved by wallsharing the bottom layer of the Steam Presser with another one directly underneath and upside down. The sides can also be shared, but that does not save as many resources.

## Usage

---

The Steam Presser processes recipes up to LV tier. It is highly encouraged to build this machine before other steam tier multiblocks because it will help significantly in crafting all the necessary bronze/steel plates.

Again, the Steam Presser can process up to 8 items at a time, is 25% faster than single-block steam machines of the same pressure, and only consumes 62.5% of the steam normally required. Upgrading to high-pressure doubles both the processing speed and steam consumption. The player will likely use this machine up through HV because of the large bonuses over single-blocks.
